EDUCATION

Northeastern University, Boston, MA

Expected May 2026

Master of Science in Software Engineering Systems

Relevant courses: Concepts of Object-Oriented Design, Web Design and User Experience Engineering, Program Structure and Algorithms, Network Structures and Cloud Computing

PROFESSIONAL EXPERIENCE

Ernst & Young LLP, Mumbai, INDIA

Sept 2021 – Aug 2024

Team Lead – Software Engineer

- Minimized re-renders and load times by 60% through collaborating with cross-functional team to implement **React's useCallback, context selectors, and localStorage** for persistent state management
- Trimmed rendering time by 50% by using Angular's lifecycle hook **ngOnChanges** to refresh data based on conditions instead of reloading the whole page
- Achieved reduction in manual effort by **90%** building an Arabic Invoice Generator for Formula 1, automating English-to-Arabic PDF translation with **context-aware accuracy conversion library**, and generating **RTL-formatted** invoices
- Cut execution time by 66.7% designing a **recursive Python script** that performs data transformation by converting JSON files to tabular data and flat files to back to **JSON** in the same format, while managing edge cases
- Optimized executing efficiency by 17.14x and reduced handling time by **94.17%** refining code using **Pandas**, decreasing the time from **1 hour for 1,800 invoices to just 3.5 minutes for 25,000 invoices**

PROJECTS

End-to-End Cloud Integration | Terraform, Shell, Packer, AWS, GCP, Python, GitHub Actions

- Streamlined infrastructure provisioning for 3+ environments by creating 15+ resources (VPCs, EC2/VMs, ALBs, ASGs, target groups) using **Terraform across AWS and GCP**, reducing manual effort by 80%
- Configured **Route53 DNS routing with SSL certificates** and **multi-AZ load balancers**, achieving 99.9% reliability
- Secured 100% of services by integrating **AWS KMS, Secrets Manager** for credentials, and **CloudWatch** for instantaneous logging and alerts, with autoscaling groups configured for automatic security patching and compliance
- Lowered image provisioning time by 60% by automating **AMI and GCP** image creation with **Packer and shell scripts** for consistent release environments, polished for autoscaling launch templates with pre-configurations
- Decreased provisioning time by 75% by building **CI/CD pipelines** using **GitHub Actions** with **PyTest** for systematized API testing, enabling zero-downtime rollouts via ALB rolling updates

Sentiment Aura | Python, FastAPI, React, Claude API, Deepgram, P5.js, Docker, GCP, WebSocket

- Developed real-time AI-powered emotion visualization app that converts speech to conditional weather patterns with **<600ms latency**
- Integrated Deepgram STT and Claude sentiment analysis APIs with WebSocket streaming for **live audio computing**
- Created procedural P5.js **weather visualization** with multi-layer clouds, and smooth transitions between weather states
- **Containerized and hosted** full-stack application on **Google Cloud Platform** with automated build workflow

Data Processor | Python, FastAPI, GCP, Terraform, Docker, GitHub Actions

- Built high-throughput data ingestion RESTful API addressing **2,133 requests/minute with 1,169ms average response time under 1,000 concurrent requests**, using FastAPI and serverless **Cloud Run** system
- Deployed async processing architecture with **Pub/Sub** message queue, achieving **95% success rate and zero message loss** through automatic NACK-based retries and exponential backoff strategy
- Designed multi-tenant security structure using **Firestore** document sub-collections ensuring physical data isolation, with **PII redaction** for compliance and tenant-scoped queries
- Orchestrated full deployment lifecycle and maintained Test-Driven Development with Terraform controlling **15+ GCP resources** and GitHub Actions CI/CD featuring **21 PyTest scripts** and code quality checks

Eventify | TypeScript, MongoDB, Express, React, NodeJS, HTML, SCSS, Git

- Engineered a full-stack event platform with 5+ core modules (auth, booking, search, payments, chat), improving user engagement by 30% using **React Redux, PWA offline support, and Fugu API for synchronous chat**
- Implemented **Internationalization (i18n)** supporting 6+ languages, expanding global accessibility
- Boosted payment efficiency by 40% by integrating **Stripe, Google Maps, and QR-based check-ins**

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, HTML, CSS, SCSS, SQL, Shell, YAML, HCL
- **Frameworks:** Flask, FastAPI, Angular
- **Databases:** MSSQL, PostgreSQL, SQLite, MongoDB, FireStore
- **Data Visualization Tools:** Power BI, Tableau
- **DevOps:** CI/CD pipelines, Kubernetes, Docker, GitHub Actions, Terraform, Packer, AWS, GCP, Linux
